SYSTEM DESCRIPTION

The MEP-006A is a 60 kilowatt, 60 Hertz, skid mounted generator set. It may be operated as either a single unit or in parallel with up to two other units of the same class and mode. The set can be mounted on a trailer. The engine is a six cylinder, four cycle, fuel injected, liquid cooled diesel engine. The engine's electrical system consists of a cranking motor, two 12 volt batteries in series and an alternator to charge the batteries. The generators provides synchronous three phase alternating current. The generator is a single bearing, brushless operation and is fan cooled. The generator set is deployed in support of combat support and combat service support operations.

There are no separately authorized components identified with this weapon/materiel system.

The following graph and table display FY 94 Class IX costs for consumables (CONS), reparable, (REPS), and net reparable (NET REPS) by MACOM. CONS and REPS are the total costs of requisitions recorded in the Logistic Intelligence File (LIF). NET REPS are the cost to the customer in the field and are calculated by applying an MSC-specific credit rate at the NSN level. TOTAL ARMY (TA) costs are the summation of costs across all MACOMs in the table. NET TOTAL COSTS are the sums of the costs of CONS and NET REPS. NUMBER OF SYSTEMS is the density recorded in the Continuing Balance System - Expanded (CBS-X). AVG PER SYSTEM costs are calculated by dividing the costs in NET TOTAL COSTS by the number of systems for each MACOM.
